**WHAT WOULD YOU LIKE THE PROJECT TEAM TO KEEP IN MIND AS WE MOVE FORWARD WITH THE REWILD MISSION BAY RESTORATION PLAN?**

A golf course & a ball field can be located anywhere. - ~~that way~~ need not be considered to stay in place, especially at the expense returning this project area to a <sup>more</sup> natural habitat.

Focus on water flow habitat restoration, providing healthy habitat for birds & other animals

# Goals Worksheet

How can the draft restoration goals be improved?

Tell us how you would change each of the goals.

Make edits, provide additions, or suggest removing parts of a goal.

How can the draft restoration goals be implemented?

Share examples, best-practices, ideas, and other ways of making these goals a reality in Mission Bay.

What other goals should be considered as part of ReWild Mission Bay?

Share any other ideas, comments, or suggestions.

## GOAL 1

Restore, enhance and/or create estuarine habitats (intertidal mudflat, salt marsh, tidal channels, & marsh/upland ecotone) to provide ecosystem functions and services, such as water quality improvement, shoreline stabilization, carbon sequestration, resistance and resilience to climate change and associated effects, and fish & wildlife support.

I think all three goals are great!

## GOAL 2

Protect the existing and restored estuarine habitat and associated wildlife from detrimental anthropogenic impacts (direct and indirect) associated with surrounding development.

## GOAL 3

Provide new and/or improve opportunities for public access, education, research and recreation in ways that improve understanding and stewardship while protecting the existing and restored estuarine habitats and associated wildlife.

## WHAT OTHER GOALS SHOULD BE CONSIDERED AS PART OF REWILD MISSION BAY?

~~at least~~ If possible, some how incorporate a way to shield the salt marsh edges from outside pollution entering the salt marsh and ultimately the bay.

Please provide your name and e-mail address if you would like to receive project updates.

### WHAT WOULD YOU LIKE THE PROJECT TEAM TO KEEP IN MIND AS WE MOVE FORWARD WITH THE REWILD MISSION BAY RESTORATION PLAN?

To make the project as sustainable as possible, consider traffic & transportation. Provide bus service from trolley. Bike paths & bike lockers. Try not to bring more cars into an already crowded area.

Since the Kendall-Frost / Campground area are near a school, public safety/policing issues are important. The ~~area~~ should be closed after dark for the safety of visitors and the benefit of wetlands wildlife.

Comments to consider:

## GOAL 1

Restore, enhance and/or create estuarine habitats (intertidal mudflat, salt marsh, tidal channels, & marsh/upland ecotone) to provide ecosystem functions and services, such as water quality improvement, shoreline stabilization, carbon sequestration, resistance and resilience to climate change and associated effects, and fish & wildlife support.

Good

## GOAL 2

Protect the existing and restored estuarine habitat and associated wildlife from detrimental ~~anthropogenic~~ impacts (~~direct and indirect~~) associated with surrounding development.

↑  
urban

Protection is very important, but opportunities for people to circulate through (elevated pathways) to learn is very important.

## GOAL 3

Provide new and/or improve opportunities for public access, education, research and recreation in ways that improve understanding and stewardship while protecting the existing and restored estuarine habitats and associated wildlife.

This goal is the most important. People only protect + steward causes that they care about. People only care about things they understand. Education through experiential learning is the best way to help people understand, care, and ultimately steward and protect more wetlands. Opportunities for people to interact and learn in the wetland is key to continued stewardship of wetlands.

## WHAT OTHER GOALS SHOULD BE CONSIDERED AS PART OF REWILD MISSION BAY?

### WHAT WOULD YOU LIKE THE PROJECT TEAM TO KEEP IN MIND AS WE MOVE FORWARD WITH THE REWILD MISSION BAY RESTORATION PLAN?

- ① During any large development, many non-native plants, e.g., tamarisk, Tamarisk, Peppertrees, mustards, wild radish, etc., seem to be accidentally introduced. Can planning help avoid this from happening?
- ② Within the past 6 months, Tealote Canyon had a huge sewage spill & San Diego River a diesel spill. Should ~~the~~ similar accidents occur in or near the study area, can the design limit the damage they cause?
- ③ Rose Creek is now a major source of trash & pollution during periods of heavy rain. Is it possible to "filter" storm waters before they get to the ReWild area? This could be done just to the north near where the golf course now exists.

# Goals Worksheet

How can the draft restoration goals be improved?

Tell us how you would change each of the goals.

Make edits, provide additions, or suggest removing parts of a goal.

How can the draft restoration goals be implemented?

Share examples, best-practices, ideas, and other ways of making these goals a reality in Mission Bay.

What other goals should be considered as part of ReWild Mission Bay?

Share any other ideas, comments, or suggestions.

## GOAL 1

Restore, enhance and/or create estuarine habitats (intertidal mudflat, salt marsh, tidal channels, & marsh/upland ecotone) to provide ecosystem functions and services, such as water quality improvement, shoreline stabilization, carbon sequestration, resistance and resilience to climate change and associated effects, and fish & wildlife support.

## GOAL 2

Protect the existing and restored estuarine habitat and associated wildlife from detrimental anthropogenic impacts (direct and indirect) associated with surrounding development.

## GOAL 3

Provide new and/or improve opportunities for public access, education, research and recreation in ways that improve understanding and stewardship while protecting the existing and restored estuarine habitats and associated wildlife.

## WHAT OTHER GOALS SHOULD BE CONSIDERED AS PART OF REWILD MISSION BAY?

TUCSON BIKE  
PATH NEAR  
FLOOD CHANNEL

INTERATED  
w/ TREATMENT  
FACILITIES.

HUMBOLDT  
COUNTY WATER  
FILTRATION  
PONDS

yes!

improving water quality would be important to all recreation users of mission bay

## GOAL 2

Protect the existing and restored estuarine habitat and associated wildlife from detrimental anthropogenic impacts (direct and indirect) associated with surrounding development.

## GOAL 3

Provide new and/or improve opportunities for public access, education, research and recreation in ways that improve understanding and stewardship while protecting the existing and restored estuarine habitats and associated wildlife.

opportunities for access should be projects that can only be done here, in this special place make use of this resource. Ball fields or tennis courts can be anywhere.

## WHAT OTHER GOALS SHOULD BE CONSIDERED AS PART OF REWILD MISSION BAY?

ENVIRONMENTAL EDUCATION  
-an estuarine education center could be a magnet for kids + adults from all over the count. and is something that could only work here in mission bay. provide access for all while still protecting the natural resource

Please provide your name and e-mail address if you would like to receive project updates.

**WHAT WOULD YOU LIKE THE PROJECT TEAM TO KEEP IN MIND AS WE MOVE FORWARD WITH THE REWILD MISSION BAY RESTORATION PLAN?**

There are many places for San Diegians to enjoy coastal access and watersports. However, there are fewer areas where resident & migratory birds have access to wetlands of various sorts without human disturbance. I'm hoping the major focus will truly embrace primary habitats for birds, especially those that are threatened and endangered. Thank you so much for all the excellent work you're doing to make this restoration a success!

Please provide your name and e-mail address if you would like to receive project updates.

## GOAL 1

Restore, enhance and/or create estuarine habitats (intertidal mudflat, salt marsh, tidal channels, & marsh/upland ecotone) to provide ecosystem functions and services, such as water quality improvement, shoreline stabilization, carbon sequestration, resistance and resilience to climate change and associated effects, and fish & wildlife support.

Goal 1 is good. though need to look at the entire system, impacts & opportunities to create a working system that integrates nature w/ human in a positive way & all potential opportunities

## GOAL 2

Protect the existing and restored estuarine habitat and associated wildlife from detrimental anthropogenic impacts (direct and indirect) associated with surrounding development.

Create strategies & solutions for surrounding development for future impact. Understand the local planning groups impact on positive future development, further protect

## GOAL 3

Provide new and/or improve opportunities for public access, education, research and recreation in ways that improve understanding and stewardship while protecting the existing and restored estuarine habitats and associated wildlife.

Provide engagement opportunities to combine the nature, animal, human component in an ecological synergy that all benefits from co-existence.

## WHAT OTHER GOALS SHOULD BE CONSIDERED AS PART OF REWILD MISSION BAY?

Eco District partner with beautiful PB a design & plan collectively, not from an advisory, limited collaboration.

What other goals should be considered as part of ReWild Mission Bay?

Share any other ideas, comments, or suggestions.

## GOAL 1

Restore, enhance and/or create estuarine habitats (intertidal mudflat, salt marsh, tidal channels, & marsh/upland ecotone) to provide ecosystem functions and services, such as water quality improvement, shoreline stabilization, carbon sequestration, resistance and resilience to climate change and associated effects, and fish & wildlife support.

~~avoid~~ jargon that could be put more simply?  
I would use verbs instead of nouns + bring the statement alive - eg improving water quality, stabilize shorelines, etc.

## GOAL 2

Protect the existing and restored estuarine habitat and associated wildlife from detrimental anthropogenic impacts (direct and indirect) associated with surrounding development.

do you mean human/urban impacts or does the term include a broader perspective? Define please, for us non scientists (I know anthropomorphic)

## GOAL 3

Provide new and/or improve opportunities for public access, education, research and recreation in ways that improve understanding and stewardship while protecting the existing and restored estuarine habitats and associated wildlife.

I support more access to wetlands for all ages. Many countries develop board walks with interpretive materials. I know construction would be disruptive + monitoring would be required but access to the resource is critical + building support for preservation.

## WHAT OTHER GOALS SHOULD BE CONSIDERED AS PART OF REWILD MISSION BAY?

- Develop a nature explore/play/create area for children in the upland ~~area~~ or another area where impact would not be too great.

Please provide your name and e-mail address if you would like to receive project updates.
